

OROFLOCK

Horse Feed

PRODUCT CATALOGUE

QUALITY, INNOVATION, PERFORMANCE
FOR A COMPLETE, WELL-BALANCED
LINE OF FOOD

OROFLOCK

**SPECIFIC, ADVANCED
NUTRITION FOR YOUR HORSE**

Oroflock is a line from the Grigi Group designed to respond to horses' nutritional needs, based on the type of work they do, their age and their psycho-physical characteristics.

Thanks to the anti-oxidant properties of the plant-based extracts used throughout the Oroflock line, our products help strengthen the immune system and prevent some disorders of the gastro-intestinal and respiratory systems, by providing a correct nutritional balance.

**STRENGTHENS
THE IMMUNE SYSTEM**

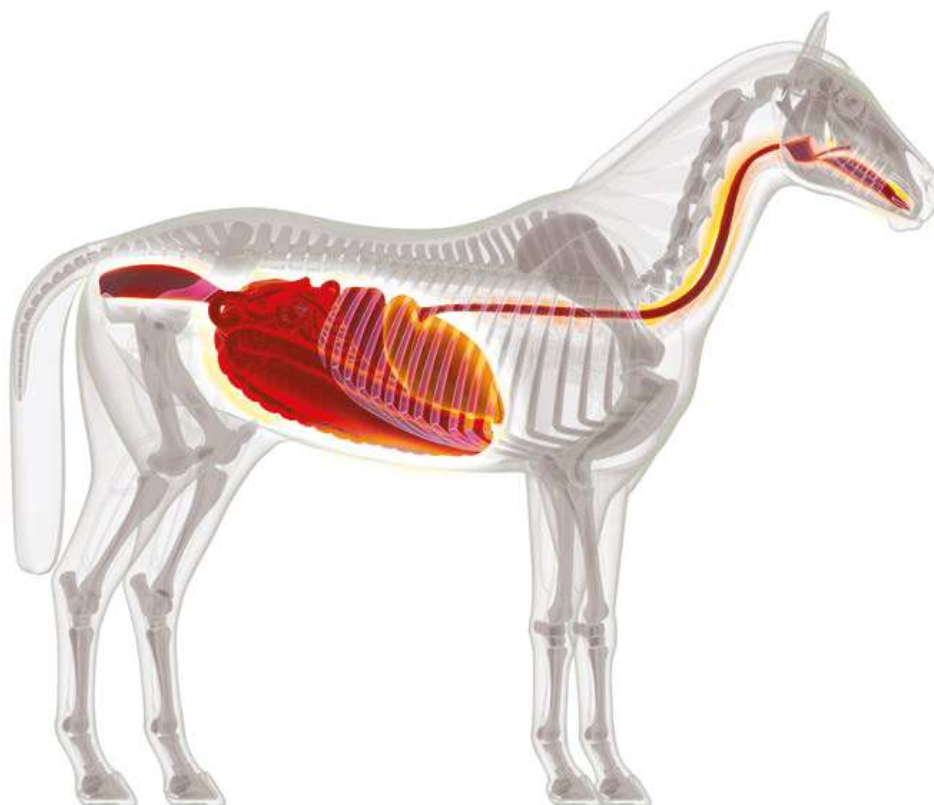

**HELPS PREVENT
GASTRO-INTESTINAL
DISEASES**

**WITH PLANT-BASED
EXTRACTS**

Nutrition

Food-wise, the horse is one of the animals that requires its owner's care and attention most of all.

THE HORSE is a large herbivore and therefore prefers to eat small amounts of food at regular intervals.

To feed your horse well, you need to adjust its food to its various needs in order to reduce or avoid metabolic/digestive problems and complications. It is essential for you to understand the functions and distinctive features of your horse's digestive and intestinal system.

The horse has a very small stomach that can hold between 8 and 15 litres. This is because an excessive quantity of food risks passing through very quickly and being badly digested in the small intestine. In contrast to its extraordinarily small stomach, especially when compared to the animal's average size, the horse has a very large intestine that occupies most of the abdominal cavity.

The considerable length and complexity of the intestinal tract is such that, although the slow passage through large chambers facilitates a more accurate digestion, it also increases the risks of a blockage with resulting stagnation and fermentation of the material present.

GENUINE WELLBEING

OROFIOCK
guarantees functional
foods thanks to its
technological processes,
such as heat-flaking,
to facilitate the
assimilation of:

- ✓ **PROTEINS:**
for structural functions
- ✓ **NATURAL PLANT-BASED
EXTRACTS**
- ✓ **GLUCIDES AND LIPIDS**
to give the animal energy
- ✓ **VITAMINS A, B, D, E**
to encourage energy
metabolism and support
the immune system.
- ✓ **GROUP B VITAMINS**
to facilitate blood circulation,
the digestive process and the
normal function of the
organic tissue
- ✓ **CHOLINE CHLORIDE**
useful for the structural integrity
of the cellular membrane
of the nervous tissue
- ✓ **MINERAL SALTS**
for healthy bones and teeth
- ✓ **AMINO ACIDS**
to combat tiredness and improve
athletic performance

Heat Flaking

The process for a highly digestible product

The steam produced is raised to a temperature of 120°C to obtain a highly digestible, completely sanitised product

The heat flaking process improves the organoleptic, chemical and physical properties of the cereals and legumes in the feed rations of the various animal species. This facilitates digestibility and greatly improves performance.

1) Protein crop seeds for protein-rich feeds

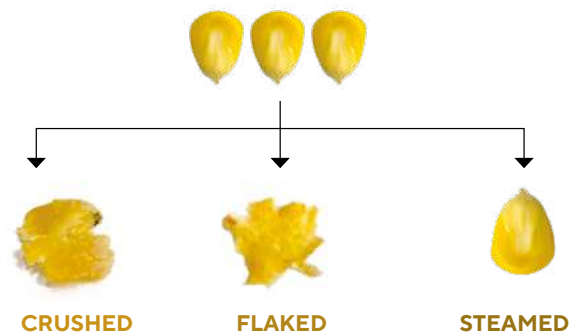

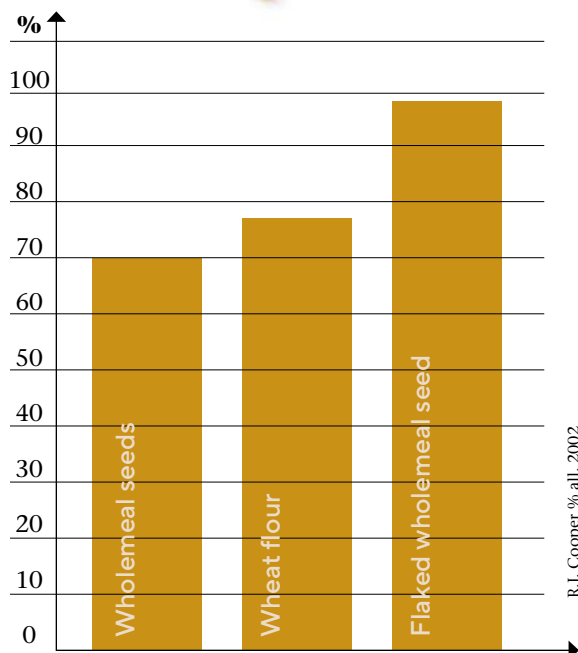

- ✓ Deactivation of main anti-nutritional ingredients
- ✓ Increase in protein digestibility
- ✓ Greater digestibility of the ration

2) A technological process for optimum digestibility:

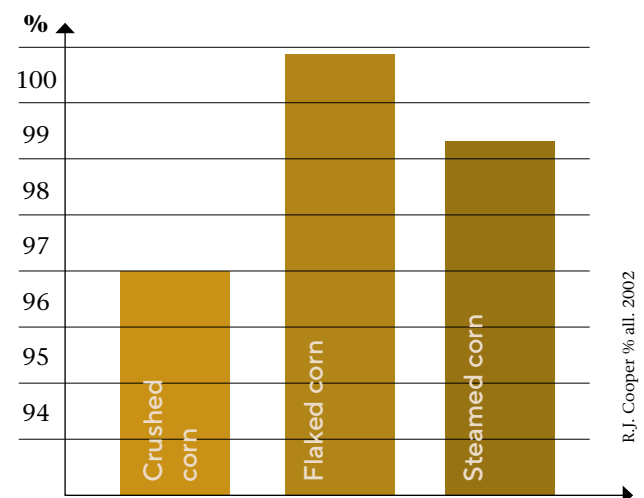

To digest starch better and prevent problems in the gastro-intestinal system

Seed digestibility:

Effect of the process on starch digestibility:

Plant-based extracts

*Food supplements with immunostimulant
and anti-oxidant properties*

**Orofirock feeds
contain plant-based
extracts that
help the horse's
immune system**

Hippocrates referred to the remedy
using plant-based extracts as the
medicine's third instrument.

THE PLANT EXTRACTS IN OROFIOCK FEEDS ENABLE:

Better bioavailability
and stronger immune system
to maintain normal good health

Strong synergy that enhances
the different properties

**Plant-based extracts
help prevent problems
in the gastro-intestinal
and respiratory systems.**

Horses are increasingly exposed to aggressive pathologies
of the gastro-intestinal and respiratory systems.

WHAT CAN WE DO TO PREVENT RESPIRATORY AND GASTRO-INTESTINAL DISORDERS?

✓ We stimulate the immune system

By integrating plant-based extracts with a correct diet, we
can help our horse's immune system. The plant-based extract
acts on the organism thanks to the chemical substances it
contains that have well-known anti-inflammatory, antiseptic,
anti-oxidant and detoxifying properties.

✓ We use a mix of natural, plant-based extracts and
essences from Fabaceae, Asteraceae, Aloeaceae, Myrtaceae
and Lamiaceae which, once absorbed mainly in the stomach
and duodenum, enter the blood stream and carry out various
functions not only on the respiratory system, but also on the
entire organism.

OROFLOCK PRODUCTS

**Our Oroflock feeds
are designed to respond
to all the nutritional
requirements of horses
of all types and ages**

Breeding and growth

ORO ALLEVAMENTO p. 10

Specific feed for the phases of reproduction, lactation and for foals

PRODUCT CODE 9035

ORO CRESCITA p. 11

Well-balanced supplement, for weanlings, yearlings and young stock up to 18-24 months of age

PRODUCT CODE 463

Maintenance

ORO SCUDERIA p. 12

Specific feed for the phases of reproduction, lactation and for foals

PRODUCT CODE 9095

drinking water available for the horses

* Product from genetically
modified seed

Product created for brood mares and studs

Product studied specifically to meet their special nutritional
demands during each physiological phase.

During the mating season, the nutritional needs of both
brood mares and studs significantly increase, whereas their
food ingestion level drops.

The brood mare's dietary requirements vary considerably
during pregnancy and during lactation, Therefore, a diet
that does not take this into account can logically cause
serious harm first on the mare's fertility and then on the
development of the foal.

A careful diet for brood mares is essential during pregnancy
and lactation to feed the foals until they are weaned.

It is also essential to protect the stud's body condition and
motility, the number and correct morphology of the sperm.
At the time of birth, it is good practice to give the brood
mare ORO ALLEVAMENTO, an appropriate feed even in
cases where milk production is scarce. A correct diet plays
an essential role in horse breeding to obtain a satisfactory
overall result.

Oro Crescita

*Well-balanced supplement
for foals up to 18 -24 months*

It guarantees the nutritional continuity begun during pregnancy

To ensure the foal's well-balanced development and growth with a correct bone and muscle structure.

This is a well-balanced supplement to supply the correct amount of energy from a balance of starches and lipids to avoid sudden steep rises in growth. The ORO CRESCITA formula was created based on extremely accurate scientific research, to offer a highly digestible feed consisting of the best ingredients. The foal's development and growth depend on its gene pool. However, the supply of choice nutrients is just as essential.

Weaning is the most delicate phase in the horse's life. In this phase, diet plays an essential role for the animal to develop correctly. Top quality proteins are required to ensure optimum growth and development of the skeleton and to guarantee a solid basis for the best development of the youngstocks' bones and muscles during their early life stages. The bioavailable minerals enable their availability for the horse to be maximised and they are essential for ensuring the formation and development of the bone structure.

* Product from genetically
modified seed

Complementary feed for horses of any breed and age subjected to light work

Well-balanced feed consisting of flaked cereals and pitted carobs with the addition of a pellet made from heat-milled, ground and cooked cereals. The heat-flaking process increases the digestibility and assimilation of the nutrients and sources of protein by up to 90%.

ORO SCUDERIA mix guarantees a well-balanced, elastic nutrition for the horse and keeps it calm and ready to work.

The product is also ideal for ponies and can be used moderately to avoid excessive weight gain and gastro-intestinal problems.

Oro Mantenimento

*Well-balanced dietary supplement,
for adult horses*

Daily nutrient-rich feed

A well-balanced supplement for adult horses, containing a good quantity of fibre to aid the horse's digestive system to function correctly.

Feed consisting of a mix of flaked cereals and carob seeds containing a small pellet that provides the correct amount of essential minerals and vitamins to meet daily requirements.

The use of flaked and crushed cereals guarantees a correct amount of more easily digestible starches that raise the energy of the ration that can be metabolised and facilitate the process of enzymatic hydrolysis, which improves the metabolic use of the food.

The product is suitable for horses of any breed or age, in any light sports activity or leisure riding.

Studied for horses that suffer from work stress

Studied specifically for horses that are very sensitive to work stress. Also recommended for horses at rest or who ride with beginners. Formulated with natural products, which enable the horse to be kept calm and serene. Also recommended for horses at the end of the race season that have to begin a period of relaxation

The cereals in the formula provide Lysine, an essential amino acid for the horse.

A feed with the perfect balance between minerals and vitamins, essential for the bone and muscle structure. A perfect mix of flaked cereals and bran, with dried forage and soya that make it an appetising and easily assimilated product.

Oro Sport Leggero

*Well-balanced supplement
for adult horses*

Everyday health and energy diet

Especially appetising and digestible, ORO SPORT LEGGERO is health and energy supplement to give your horse daily, whatever the breed, age and type of work. All the cereals are cooked and/or crushed using steam at high temperatures which make them highly digestible. This product will satisfy the tastebuds of even the most demanding horse.

Oats and barley contain beta-glucans, complex polysaccharids that have a low cholesterol and hypoglycemic action and act on the intestinal microflora, with a positive selection of lactobacilli and bifidobacteria. The flaked corn provides energy and a discreet quantity of amino acids without creating any problems of fermentation. The carobs are all-round nutritious seeds. With little fat and sodium they have a good percentage of fibre and pectin, especially useful to regulate digestion and the intestine.

Studied to meet the nutritional demands of the sports horse

The quality of nutrients in the athletic horse is far more important than the quantity. Our primary objective is to meet the nutritional needs of the sports horse. The muscle work involved requires a continual high level of energy that can be met with a sufficient amount of energy and all the nutrients that can enable it to be used in a short space of time.

ORO SPORT INTENSO contains an extremely rich pellet and flakes q l guarantee balance and elasticity of use for the horses you are asking to perform to the maximum in competitions.

It contains flaked soya, an essential source of protein for the horse, as it provides Lysine, an essential amino acid for this animal species.

The biological quality of its protein enables it to be used in moderate quantities to provide the correct level of amino acids without tiring the liver and kidneys.

It provides the perfect balance of minerals and vitamins, essential for bone and muscle structure. The lipids enable the horse to obtain energy for work and avoid an excessive production of lactic acid. It adapts to a wide range of dietary requirements and situations for horses with intense physical activity.

Oro Max Best

Well-balanced supplement, also indicated for equine metabolic digestive syndrome and gastritis

Product low in non-structural carbohydrates and high in lipids

Supplementary feed with high lipid content, suitable for horses used in intense sports. The fats and especially their components, the fatty acids, are a precious source of energy for their muscles.

Horses who normally ingest fats with their diet are more likely to mobilise their body fat and less likely to accumulate lactic acid during work. In fact, the fats increase endurance, provide energy and at the same time have a calming effect on the horse. They also reduce the probability of certain metabolic problems and lower the horse's heat load (temperature). More specifically, the fat is a good source of important nutritional liposolubles, such as essential fatty acids and liposoluble vitamins (especially Vitamin E). ORO MAX BEST contains plant-based lipids and protected fatty acids. If lipids are provided by the diet, they ensure metabolic adjustments which enable the horses to preferably use this source of energy and save muscle glycogen during exercise, especially during intense physical effort.

* Product from genetically modified seed

Helps prevent respiratory pathologies

It contains extracts of natural plant-based essences of Fabaceae, Rosaceae, Plantaginaceae, Myrtaceae, Rutaceae and Labiateae. The herb and propolis extracts contain natural active ingredients, well-known for their immunostimulant, antiinflammatory and healing properties.

It has been estimated that over 60% of the stabled equine population suffers from latent respiratory diseases, a condition that negatively affects the animals' performance and, if left untreated, can lead to COPD (heaves).

Essential oils have a well-known antiseptic, mucolytic and expectorant action on the respiratory mucous. Taken orally, they are absorbed mainly in the intestine and duodenum before entering the blood circulation and carrying out the various functions that benefit the entire organism. The product adapts to use in a wide range of dietary requirements and situations for horses of various breeds, age and type of work.

Oro Fibre Più

*For horses in light sports activity
or in convalescence*

Product low in non-structural carbohydrates and high in fibre

ORO FIBRE PIÙ is a horse supplement in pellets containing different sources of fibre, low in sugar and starch. The formula makes the feed highly digestible and provides slow-release energy to maintain a healthy digestive system.

Fibre from just forage is not always enough to maintain the horse's physical form at any physiological stage. The possibility of giving different sources of fibre simultaneously encourages fibre fermentation inside our horses' large intestine, where a large number of bacteria live that make the cellulose digestible so it can be used to produce energy. ORO FIBRE PIÙ also contains plant-based extracts and is packed with vitamins, minerals and trace elements, and provides the horse with top quality protein from soya and sunflower seed.

Recommended for horses and ponies that require a diet with a low content of starch and sugars; excellent also to partially replace hay for the midday feed and it is ideal for horses and ponies that require an easy ration to chew.

INTEGRATION PER KG

Vitamin A	40.000 U.I.
Vitamin D3	3.000 U.I.
Vitamin E	50 mg
Vitamin B1	2,00 mg
Vitamin B2	1,00 mg
Vitamin B6	1,0 mg
Vitamin B12	0,020 mg
Choline chlooride	100 mg
Biotin	0,05 mg
Calcium D Panththenate	5,00 mg
Niacin	100,00 mg
Iodine	3,00 mg
Zinc	100 mg
Manganese	50 mg
Selenium	0,30 mg

ANALYTICAL RESULTS %

Crude protein	12,50
Crude fats	6,80
Crude fibre	8,00
Crude ash	3,90
Sodium	0,20

Instructions for use

Give 1.5-2.5 kg once or twice a week.
Mix the product in hot water and serve it
to the horse luke warm without the need
to add anything else.

Always leave good quality hay and fresh
drinking water available for the horses.

* Product from genetically
modified seed

Ideal for horses in convalescence

ORO MASH is a feed studied for periodic use entirely to
rebalance the horse's intestinal flora.

Integrated with yeasts, mineral salts and vitamins, it
guarantees a toning, restorative effect.

Given continually, it helps the liver and kidneys to
function and stimulates the elimination of any toxins.

Linseed is not only rich in essential amino acids, but also
in Vitamin E and protein. The bran has a balanced ratio
of fats, starch, digestible cellulose and is rich in vitamins
in the B group. It has a medium-high protein content and
guarantees a steady digestive system.

Oro Jolly

Supplement for horses of any age and physiological stage

A high fibre content with added vitamins, minerals and plant-based extracts

Recommended at any time of day to be added to any type of concentrate, for all horses of any age and physiological stage. ORO JOLLY is a mix of pellets with various fibrous components and the addition of integrated vitamins-minerals, plant-based extracts and yeast.

This product can be used to integrate fibre in the daily ration or also as a mash to replace hay for elderly horses with mastication problems.

A product low in carbohydrates and sugars, useful for improving the horse's body condition without giving excess energy. The horse needs to have an adequate amount of fibre in its daily ration, so it does not lose weight and have a negative impact on the intestinal bacteria population.

It can be added to the daily ration of concentrates and cereals to give the essential amount of fibre the horse requires. Also ideal as a mash with added water.

Sodium chloride
Products obtained from plant-based extracts.

Grigi Group

*For over 50 years,
feeds as nature creates them*

Today, with a harvest of over two million quintals, it has become a national benchmark for the livestock feed sector.

The Grigi family's entrepreneurial history is rooted in the land, in the cultivation of cereals in Italy's green heart: Umbria.

In the early years of this century, the current management was aware of the evolutions and technological innovations on the market and introduced one of Italy's most modern cereal flaking plants.

The current product range sums up the company philosophy: genuine, natural, healthy

From choosing select, controlled raw materials to close monitoring and targeted analyses in all the production stages, the end result is a superior quality, nutritious, well-balanced product that respects the age-old relationship with its surrounding nature.
